Sealing solutions for green roofs Safe design and planning

Prefabricated and ready-to-install custom made
membranes made of NovoProof® EPDM

Flat roofs and
green roofs

Garages and
Carports

powered by

The future-oriented construction method

The provided dimensions of building object will be converted into a CAD production drawing, which contains all required penetrations such as connections and closures.

Thanks to the reliable ThermoFast® welding technology, NovoProof® membranes and preforms made of elastic rubber materials can be welded together into a tailor-made and one piece sealing product at the factory.

This waterproofing product will be packed and delivered as ready-to-install "Maßanzug" product on the agreed date. The starting point and the direction for unrolling are marked on the package.

One particular advantage is the high level of prefabrication of the manufacturer DuraProof:

- ▶ NovoProof® roofing membranes can be quickly installed regardless of weather conditions
- ▶ This easy and secure installation saves valuable installation time.

Connections and closures as well as other details will be subsequently waterproofed, and voila: there is the perfect seal. Directly after the installation, the roof shall be secured against wind uplift with adequate ballast, such as gravels, pavers or vegetation.

Benefits for designers, building owners and roofers

The simple installation can be completed in a short period of time, which makes temporary arrangement at construction sites unnecessary, saving time and money.

Your property will be effectively protected against weather at once and be waterproofed for generations.

Both prefabricated and custom made membranes are universally suitable for new construction and renovation projects.

Efficient, secure and waterproof.
