The future-oriented construction method

The provided dimensions of a building object will be converted into a CAD drawing, which contains all required penetrations such as connections and closures.

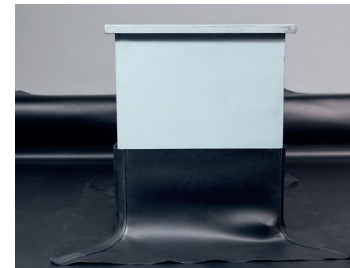

Thanks to the reliable ThermoFast® welding technology, NovoProof® membranes and preforms can be welded together into a tailor-made and one-piece sealing product at the factory.

This one-piece waterproofing product will be packed and delivered as ready-to-install 3D customised & pre-assembled membranes on the agreed date. The starting point and the direction for unrolling are marked on the package.

One particular advantage is the high level of prefabrication of the manufacturer DuraProof:

- ▶ NovoProof® roof sealing products can be quickly installed regardless of weather conditions
- ▶ This easy and secure procedure saves valuable installation time

Connections and closures as well as other details will be subsequently waterproofed, and voila: there is the perfect seal. Directly after the installation, the roof shall be secured against wind uplift with adequate ballast, such as gravels, pavers or vegetation.

Benefits for building owners and roofers

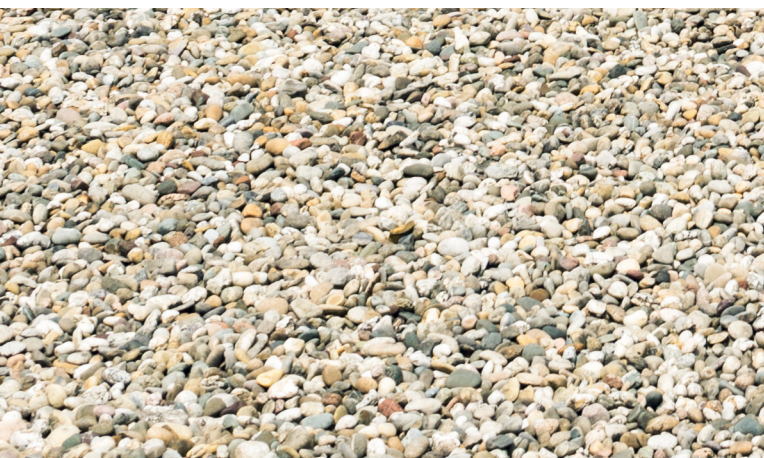

The simple installation can be completed in a short period of time, which makes temporary arrangement at construction sites unnecessary, saving time and money.

Your property will be effectively protected against weather at once and be waterproofed for generations.

The prefabricated sealing product ("Maßanzug") is universally suitable for new construction as well as renovation projects.
